URBAN DESIGN

elements | microstripes

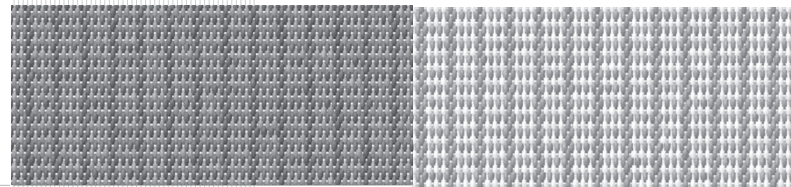

The new colours and designs were developed by Urban Design mainly for the urban space.

They are above all intended for upmarket businesses, hotels, restaurants and international brands that, in choosing their awnings, strive to combine communication, advertising and image with top-level architectural design.

The new design line "Urban Microstripes" by SATTLER is based on subdued colours, which on the one hand perfectly harmonize with various façade types – also historic façades – and on the other hand are printable, for lettering and company logos.

Awnings are symbols of life and interaction

(Quote: Dr. Leonhard Oberascher)

Wall

When we look around us within urban surroundings, we see walls and building façades.

Sky

When we look upwards, we see the sky with its various shades of blue.

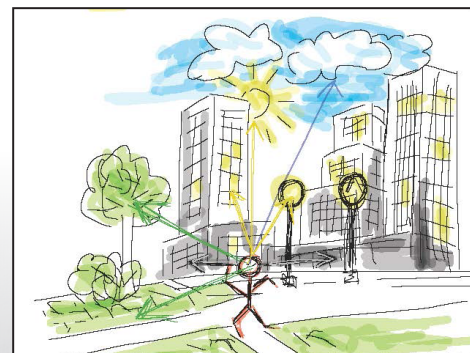

Park

Between buildings, we discover free spaces or parks.

Lights

During the day, our environment is lit by the sun and in the evening and at night, street lamps and illuminated windows light up the urban scene.

- structures on a micro level
- subdued colors especially developed for city surroundings
