SATTLER 
thinking highTEX

FEATURES

Quality in every fibre.

Our top-quality awning fabrics are made from 100% spundyed branded acrylic and guarantee for the highest functionality.

Long-lasting pleasure guaranteed.

The special finish of the fabric prevents the permeation of water, humidity and dirt. For utmost comfort that you will enjoy for many years.

Reliable quality guaranteed.

Our 5-year guarantee covers the protective function, durability and colour fastness of our fabrics. More information at www.sattler-elements.com

Saving energy naturally.

With an ideally positioned Sattler awning, it is possible to reduce the energy consumption of your air conditioner by up to 80%.

Fabrics as a role model.

Responsibility is what counts. Certification according to the ISO standards 9001:2008 and 14001:2004 as well as the OEKO-TEX® seal are a must. All our products comply with the REACH requirements.

Skin protection guaranteed.

Sattler sun-protection fabrics are tested according to the UV standard 801, the world's strictest testing program. Your skin protection guaranteed.

Simply to the point.

The Sattler Design Selector enables a fast and simple selection process for your choice awning fabric.

Enjoy our premium shade

The premium features at a glance.

The perfect interplay of top-quality design and technical functionality.

Sattler awning fabrics offer more than just shade. They protect you from sun and weather. They constitute a central design element in your house or business, or in your surroundings. Sattler fabrics create atmosphere. They give you the living space you need, for many years. This is why Sattler has chosen to fuse sensuality and function. Our fabrics are sophisticated high-tech products for the highest demands, and come in timeless designs and a wide array of models.

In brief: "thinking highTEX". Our quality promise for your premium shade.

True beauty comes from within. Quality with a seal.

What makes the quality of a Sattler awning fabric is the result of long-standing, continued research. Innovations in technical functionality and processing are our answer to your different requirements and needs.

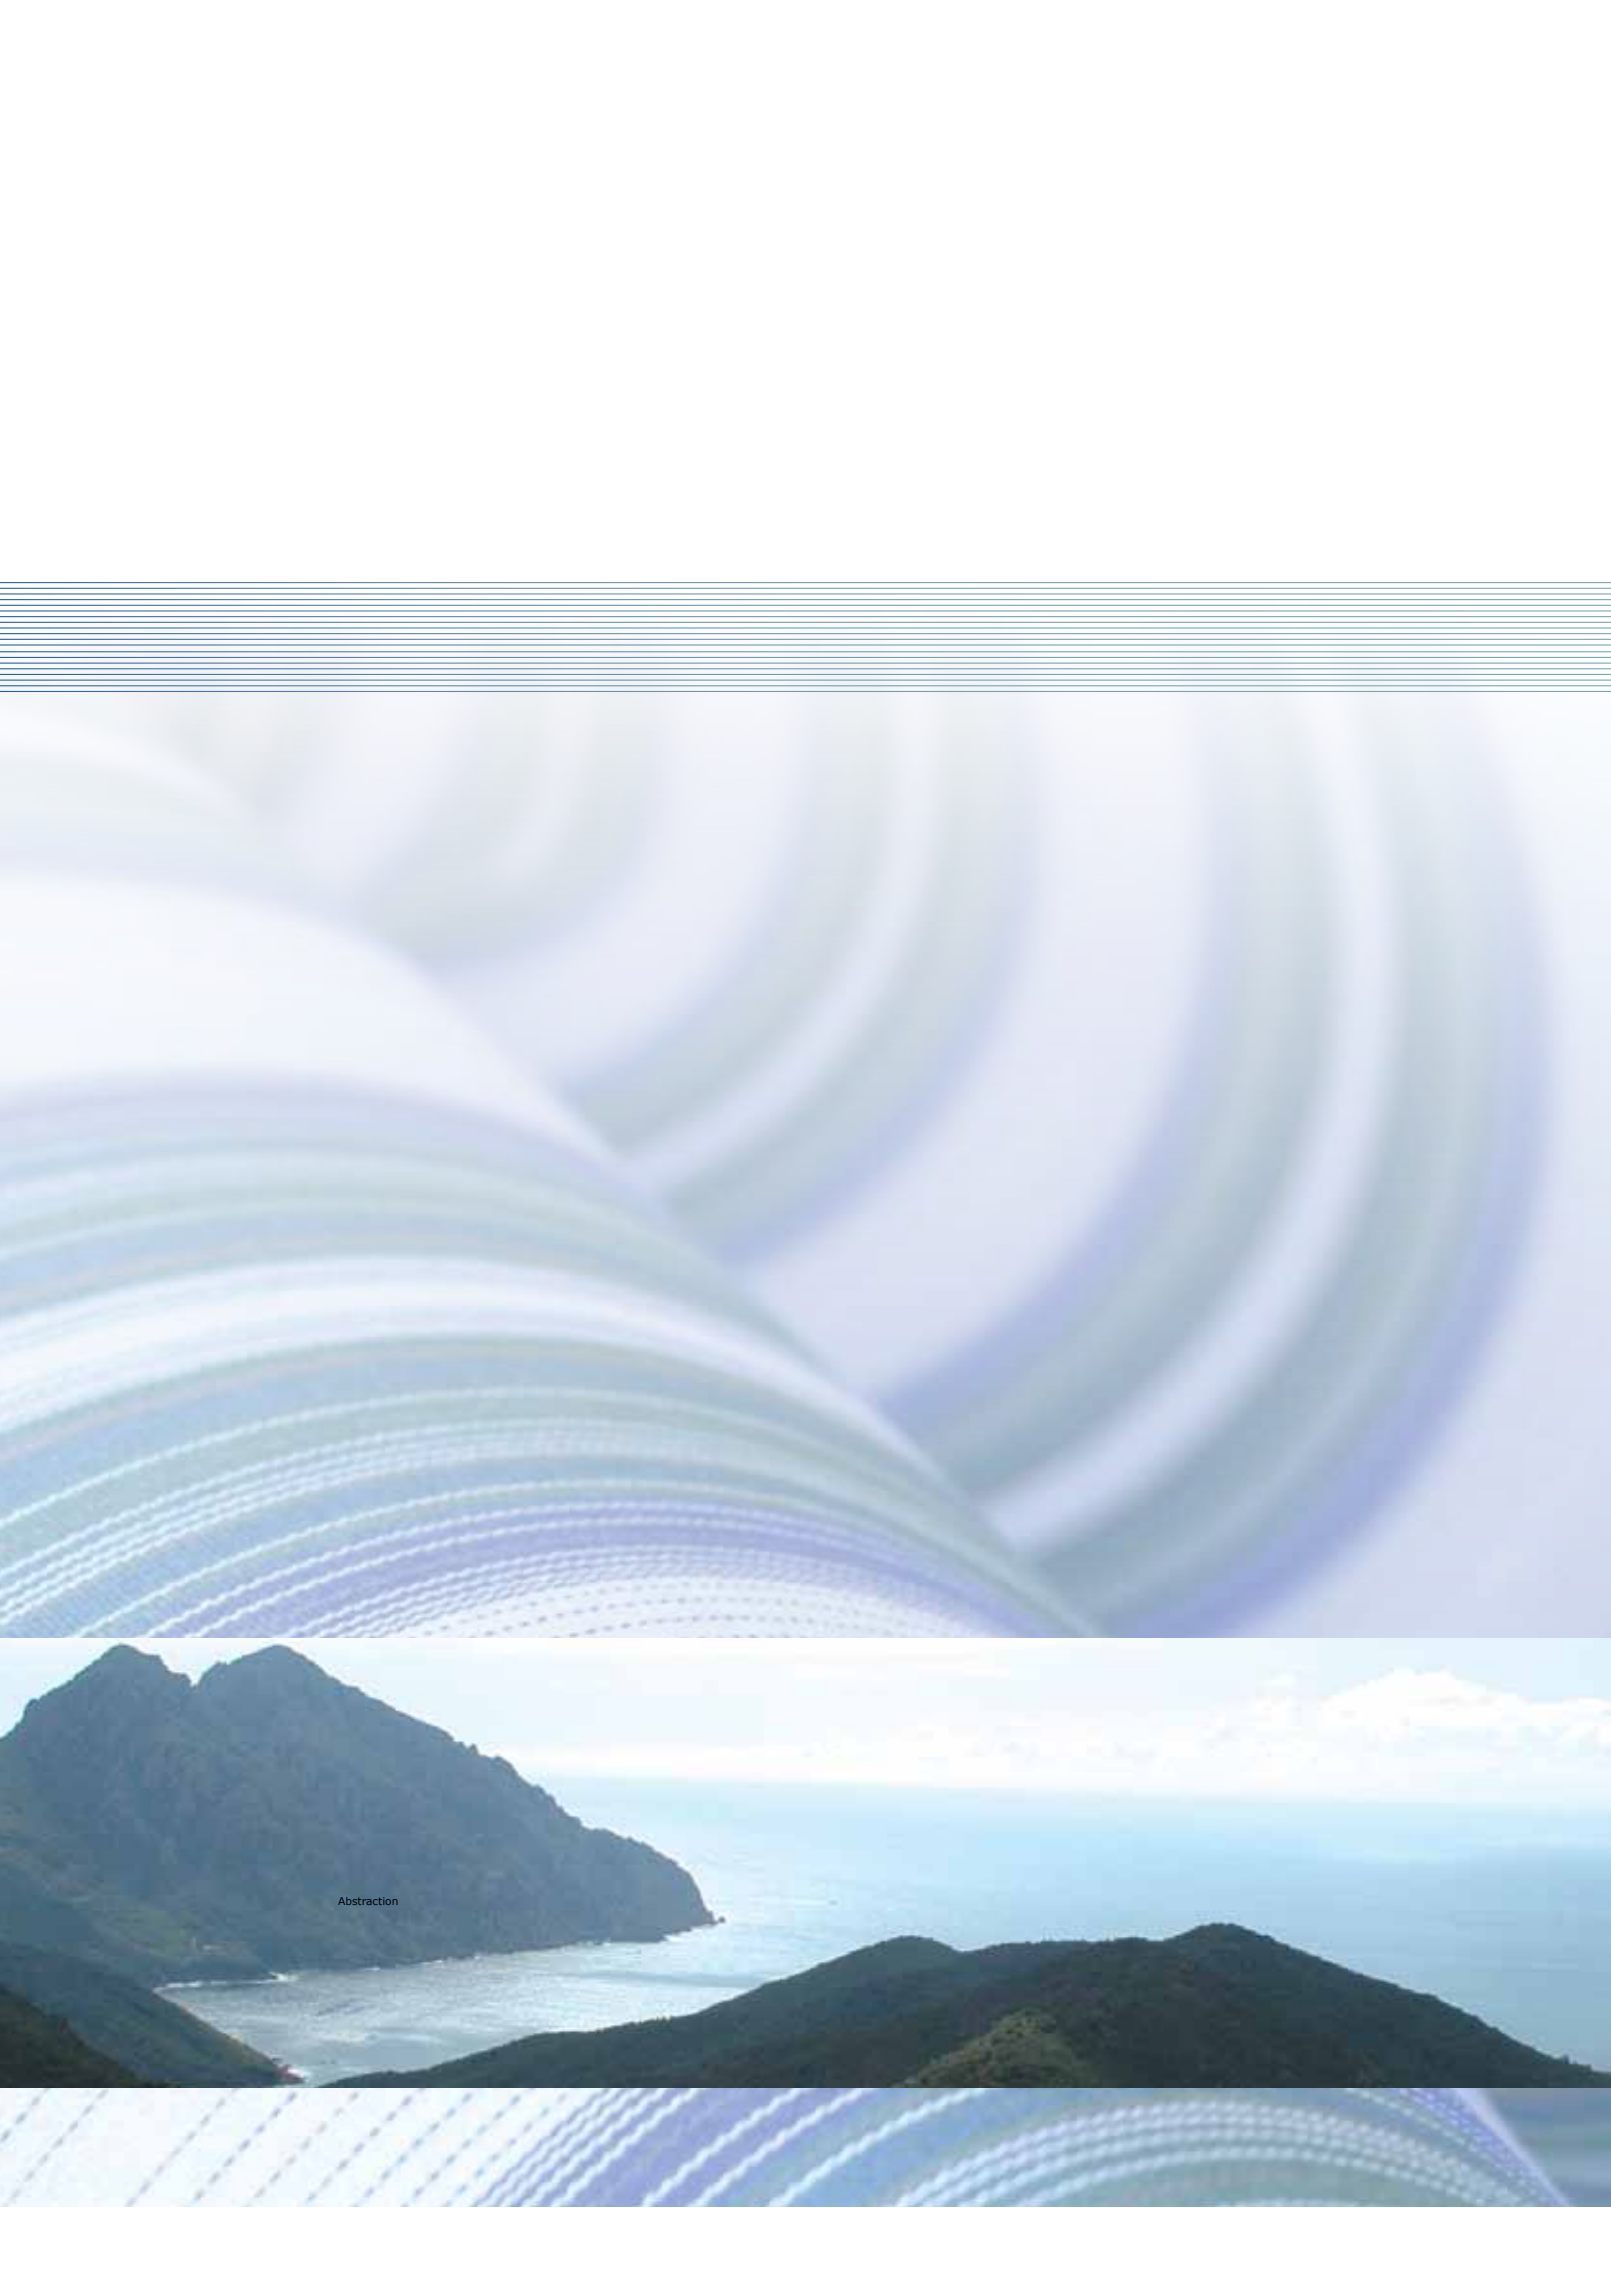

The Sattler highTEX quality seal stands for outstanding tested quality, and thus for an awning fabric that still meets the most demanding requirements after many years of use.

Talking Color Kit ##

Feeling design with all your senses.

Talking Colors bring awning designs to life. Feel the colours and their effect. Rely on your gut feeling and choose your favourite design.

Abstraction

Shade for my region.

Not by chance your perfect shade.

Sattler's awning patterns are snap-shots of the world around us!

The worlds of color which we perceive in our environment are influenced by:

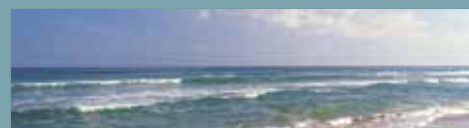

Light, climate, landscape and culture

The specific colour climate of a region has a substantial effect on our well being. Despite an increasing globalisation process, we find different worlds of color in different regions. We differentiate between uninhabited regions (natural color worlds) and inhabited regions (artificial color worlds). They distinguish a region.

In co-operation with Dr. Leonhard Oberascher.

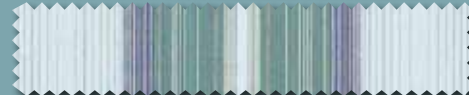

Landscape impression

Primary colors are extracted from the regional symphony of colors.

This is the basis for our patterns.

Awnings are symbols of life and interaction.

(quote from Dr. Leonhard Oberascher)

URBAN DESIGN elements | microstripes

The new colours and designs were developed by Urban Design mainly for the urban space.

They are above all intended for upmarket businesses, hotels, restaurants and international brands that, in choosing their awnings, strive to combine communication, advertising and image with top-level architectural design.

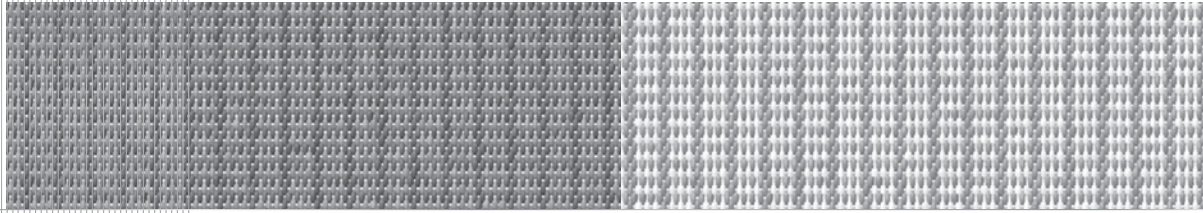

The new design line "Urban Microstripes" by SATTLER is based on subdued colours, which on the one hand perfectly harmonize with various façade types – also historic façades – and on the other hand are printable, for lettering and company logos.

What's so special about this new design is that the traditional uni-coloured fabrics will be replaced by "microstripes" with their unique texture. These fine ton-sur-ton differences lend the fabrics additional value and elegance. In addition, the material is less prone to soiling, a major advantage in terms of both aesthetics and sustainability.

Sattler Urban Design

Shaded by sophisticated textures

When roaming freely in our urban space, we have a number of fixed orientation points by which we navigate. These different reference points are also the base for our colour themes.

SATTLER has identified 4 thematic groups in the urban surroundings, which can be matched with special colour variations.

- Microstructures
- subdued colours
- discreet colours especially for urban areas

Wall

When we look around us within the urban space, we see walls and building façades.

Sky

When we look upwards, we perceive the sky with its various shades of blue.

Park

In other surroundings, like between buildings, we discover free zones or parks.

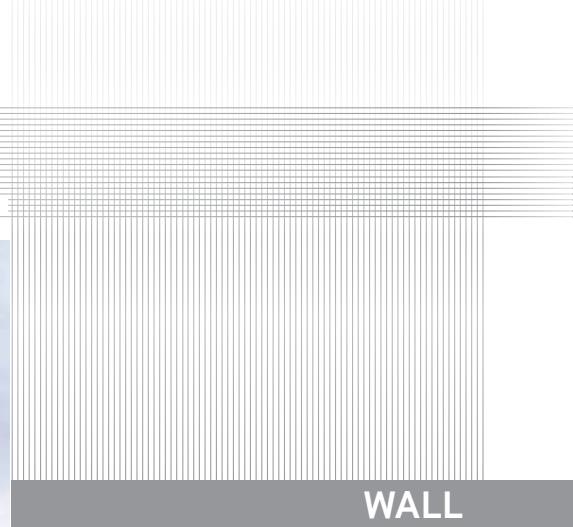

Lights

During the day, our environment is lit by the sun and in the evening and at night, street lamps and illuminated windows light up the urban scene.

easyCLEAN

Premium shade for generations.

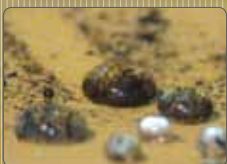

TEXGARD

Perfect and durable protection of your awning cloth thanks to the Texgard Easy. Every single fibre is carefully covered with a protective coating. Our proprietary impregnation prevents the permeation of the fibre by water, humidity and dirt, thus supporting the self-cleaning effect.

Sun-protection fabrics by Sattler offer:

- Outstanding dirt- and fungus-repellence
- High water repellence
- Very good rolling behaviour
- Excellent surface
- Brilliant and durable colours

Just my shade

My premium shade in three easy steps

DESIGN SELECTOR

The Sattler Design Selector is an easy and safe method to preselect your favourite design. For optimal assessment, the various awning fabrics are matched with various house types and façade colours. This helps you get a first impression on how your awning might look when assembled in place. Once your decision is made, you may print out your favourite selection using the provided function.

Choose your new awning in three easy and simple steps in the comfort of your own home.

Sattler Design Selector

Design your own awning in three easy steps

Shade with a cooling effect

SPECIALS elements | reflect

Keep cool. The Reflect fabric offers optimal heat and UV protection under conditions with intensive solar radiation. You can regulate the indoor temperature naturally without the necessity for extensive use of energy consuming air conditioning. This helps you save money and support the climate at the same time.

Advantages:

- Maximum UV protection
- Natural temperature control
- Light transmission up to 8 times lower than in comparable products
- Heat reduction indoors by 10°
- Glossy surface for a classy appearance

Relax and feel good in the shade

SPECIAL elements | reflect air

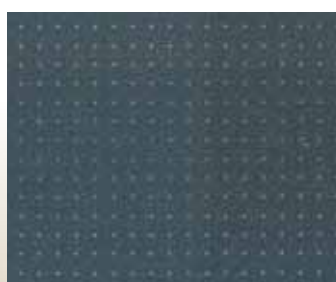

Take a deep breath. Reflect Air spoils you with a combination of optimal anti-glare and heat protection properties. At the same time, its regular perforation enables a view to the outside. Wherever an open airy atmosphere is required, with lots of light.

Advantages:

- Maximum UV protection
- Natural temperature control
- Reduction of indoor heat by up to 10°C
- Pleasant room climate due to ventilation and brightness
- Energy savings due to natural lighting
- Glossy surface for a classy look

- High tensile strength
- Low elongation under high load
- High water-repellence
- High wind and dimensional stability

Skin protection guarantee

Reduce the UV load to your skin
by up to 99%

UV PROTECTION

In recent years, UV radiation has considerably increased. What many of us ignore: we are also exposed to UV radiation in the shade. Choosing a Sattler awning fabric means opting for safe UV protection. For example the skin of a person rated UV type I (red or blond hair, blue eyes and a very fair complexion) has an intrinsic protection time of approximately five to ten minutes. This person risks a dangerous sunburn in the case of unprotected exposure to full solar radiation. Already with a UV index of 40 around 97.5% of the radiation is reflected and absorbed.

UV protection by comparison	UV Index
Sunblocker correctly applied (LSF)	0 - 30
Shade under a tree	ca. 5 - 15
Shade under a sunshade (without special UV protection)	15
Sattler sun protection fabrics	40 - 80
